# Advanced Disaster Recovery: Protect clients with the flip of a switch

Protect your clients' workloads when disaster strikes by instantly spinning up systems with cloud-based recovery and restoring them anywhere. When you add Advanced Disaster Recovery to Acronis Cyber Protect Cloud, you can easily extend the cloud recovery services your clients need.

Get clients back to business in minutes when disaster strikes by spinning up their systems in the Acronis Cloud and restoring them anywhere, ensuring immediate data availability. Make disaster recovery painless and increase efficiency with orchestration, runbooks, and automatic failover.

## ENHANCED PROTECTION FOR ACRONIS CYBER PROTECT CLOUD

Acronis Cyber Protect Cloud is the only service provider solution that unites cybersecurity, data protection and management to protect endpoints, systems and data. Its AI-enhanced integration and automation eliminates complexity so you can protect clients better while keeping your costs down.

Enhance your disaster recovery service with essential cyber protection at no cost. Gain a unique competitive advantage and increase your profitability with essential cyber protection functionalities that cover all endpoints.

ACRONIS CYBER PROTECT CLOUD INCLUDES:	ADVANCED DISASTER RECOVERY ADDS:
<ul style="list-style-type: none"> <li>• File, image, and applications backup</li> <li>• Local recovery with Instant Restore</li> <li>• Test failover</li> <li>• Cloud-only VPN connection</li> </ul>	<ul style="list-style-type: none"> <li>• Production and test failover to the Acronis Cloud</li> <li>• VPN-less deployment option</li> <li>• IPsec Multisite VPN support, L2 site-to-site open VPN</li> <li>• Multiple templates mRunbooks</li> <li>• Custom DNS configuration</li> </ul>

## REDUCE DOWNTIME

Get clients running in mere minutes by spinning up IT systems in the Acronis Cloud with full site-to-site connectivity and the ability to recover them to similar or dissimilar hardware.

## MINIMIZE COMPLEXITY

Get clients running in mere minutes by spinning up IT systems in the Acronis Cloud with full site-to-site connectivity and the ability to recover them to similar or dissimilar hardware.

## GROW RECURRING REVENUE

Get clients running in mere minutes by spinning up IT systems in the Acronis Cloud with full site-to-site connectivity and the ability to recover them to similar or dissimilar hardware.

## DELIVER DISASTER RECOVERY SERVICES WITH EASE

### Disaster recovery for physical and virtual workloads

Minimize downtime by enabling easy, scalable and efficient cloud-based recovery of all popular workloads including Windows and Linux physical servers and VMs, major hypervisors, and Microsoft apps.

### Disaster recovery orchestration

Simplify disaster recovery and increase operational efficiency by automating failovers and orchestrating disaster recovery procedures using runbooks – a set of instructions defining how to spin up your client's production environment in the cloud.

### Production failover

Ensure quick and easy automated failover of the client's production environment to an offsite server running in Acronis Disaster Recovery Storage or to a hot storage in the Acronis Cloud.

### Site-to-site VPN connection

Enable secure VPN connection between the client's local site and the cloud site to facilitate partial failover of tightly dependent servers on the local site. When one of the servers is recreated on the cloud site, the servers continue to communicate, ensuring minimal downtime.

### Near-instant RPOs and RTOs

Achieve both RPOs and RTOs of less than 15 minutes. The Acronis RunVM engine enables best-in-class production and test failover speed, while flexible backup frequency policies lead to tighter RPOs.

### Execution monitoring

Gain visibility into disaster recovery orchestration with a detailed runbook-execution real-time view and execution history.

### Point-in-time recovery

Prevent data loss and avoid data corruption with granularity of control over data protection and recovery capabilities. Restore systems and data to any recoverable point in the past, instead of to the latest one.

### IPsec multisite VPN support

Strengthen security with IPsec multisite VPN support that integrates secure protocols and algorithms, so you can easily support clients with multiple sites that are hosting critical workloads with higher requirements for security, compliance, and bandwidth.

### Custom DNS configuration

Create custom DNS configurations for disaster recovery cloud services in the Acronis Cloud. You can then adjust DNS settings for your clients simply – making it even easier for you to support them.
